

Thank you for purchasing PROPOSAL Minimalist Keynote Presentation by GoaShape.

We believe that it will be easy to work with.

Intro Words

You need a business stationery at a high level? We bring a simple solution. Conveniently fill the presentation of the contents and print your A4 documents. More simple it could not be. You do not need Photoshop or InDesign, it is you that can do high-end prints. The presentation is ready for A4 and prints are made not to the brim, which allows you to print on ordinary office printer. We've set up for you and dynamic transitions if you've decided to use the presentation and the usual way on a projector or monitor. You could manipulate all the pictures drag n drop method or via an icon to select photos. All graphs are real Keynote charts which you can edit using the table or dynamically using sliders. All texts are set style, thus have everything under control for a few seconds and of course globally.

We believe that our efforts to create a full product released, and facilitates a lot of people their jobs, to save time in their life :)

For proper functionality of the template, please install all fonts. You can download them for free from the attached links and use them for free.

- Documentation
- Pixel Perfect Progressive Design
- Resizable Vector Elements
- Dynamic Transmission Prearranged
- Masonry Portfolio

How Use Keynote Software

CREATE A NEW SLIDE

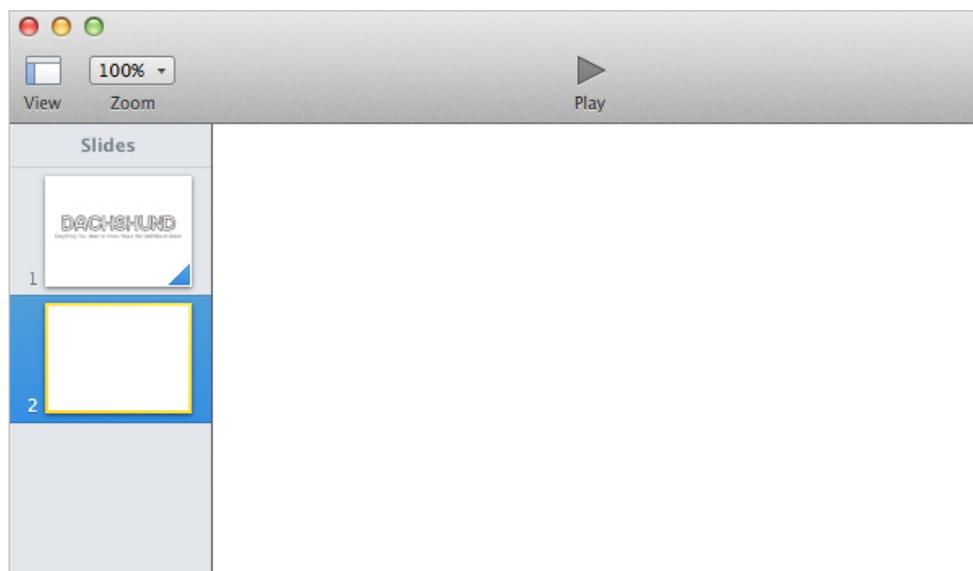

Next, I will show you how to create a new slide. You can create as many slides as you wish, although it is worth bearing in mind that your audience may lose interest if your presentation is particularly lengthy.

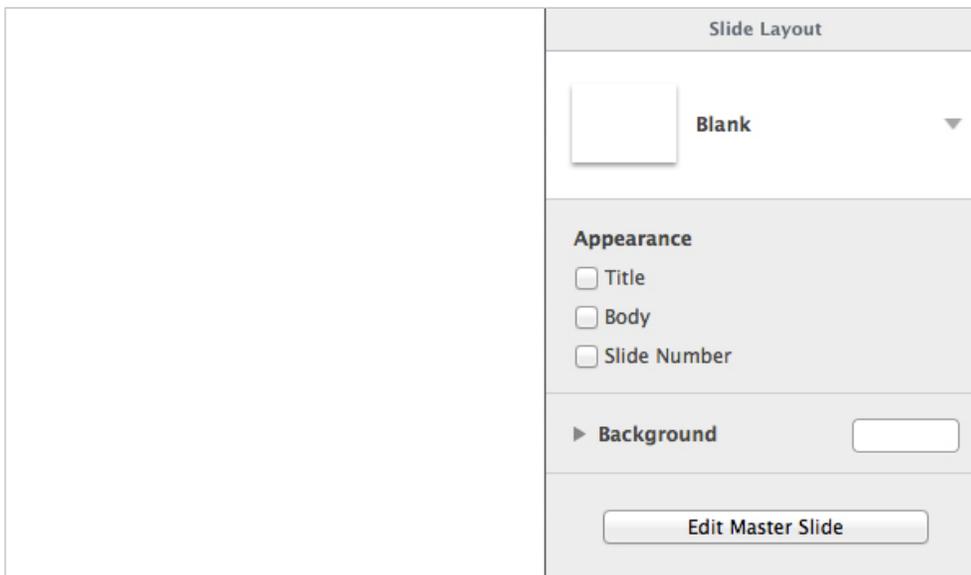

Click the + icon and then select a template.

Every slide included in your presentation can be viewed via the Slides sidebar.

You can modify the appearance of each slide via the Format sidebar. Click Background to change the background colour, or tick the corresponding checkbox to add a title, body of text, and slide number.

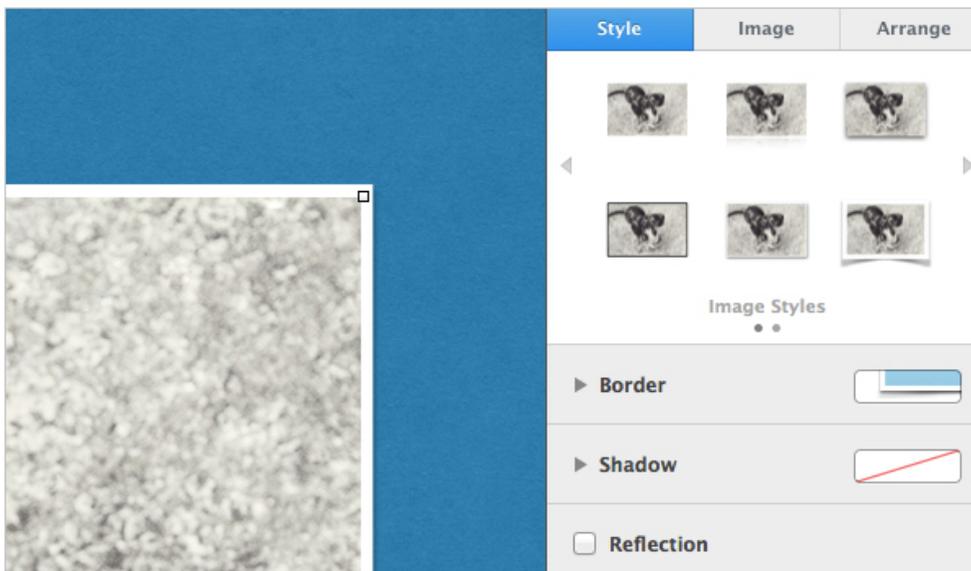

INSERT IMAGE

Images can help illustrate certain information and are used to break up large walls of text. When inserting an image into your presentation, Keynote will automatically display your entire iPhoto library for you to browse, categorised by Event.

SELECT AN IMAGE

Click Media, Photos and then select an image of your choice. Edit the appearance of your image via the Format sidebar.

EDIT SLIDE

Start by editing the opening slide. As you can see, every Keynote theme includes a title and subtitle already pre-inserted into each slide, ready to be edited.

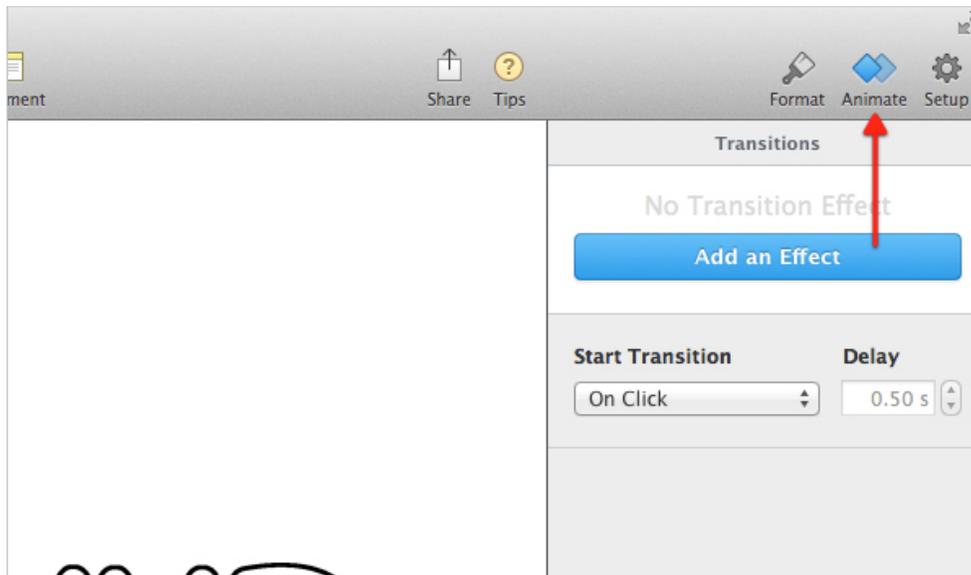

Double-click the text to edit.

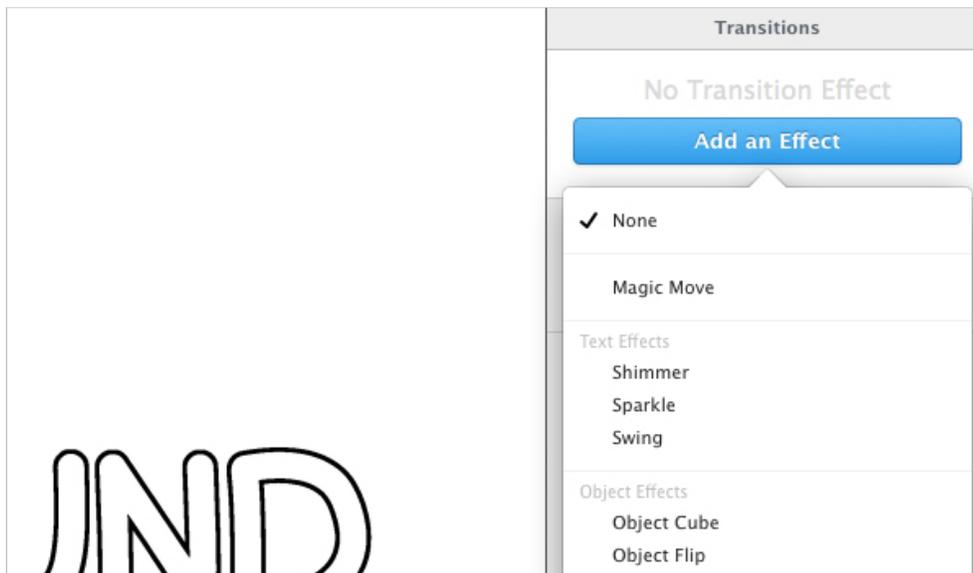

Enter a title and subtitle.

ADD A TRANSITION EFFECT

Now, it is time to add a transition effect so that each slide merges seamlessly into the next. Here's how.

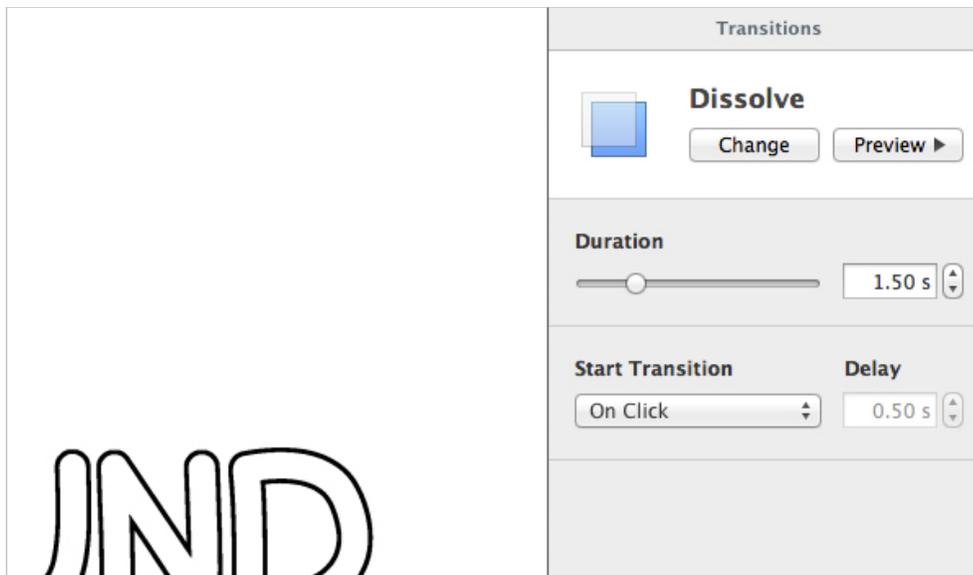

Click Animate.

Click Add an Effect and then select a transition effect from the menu.

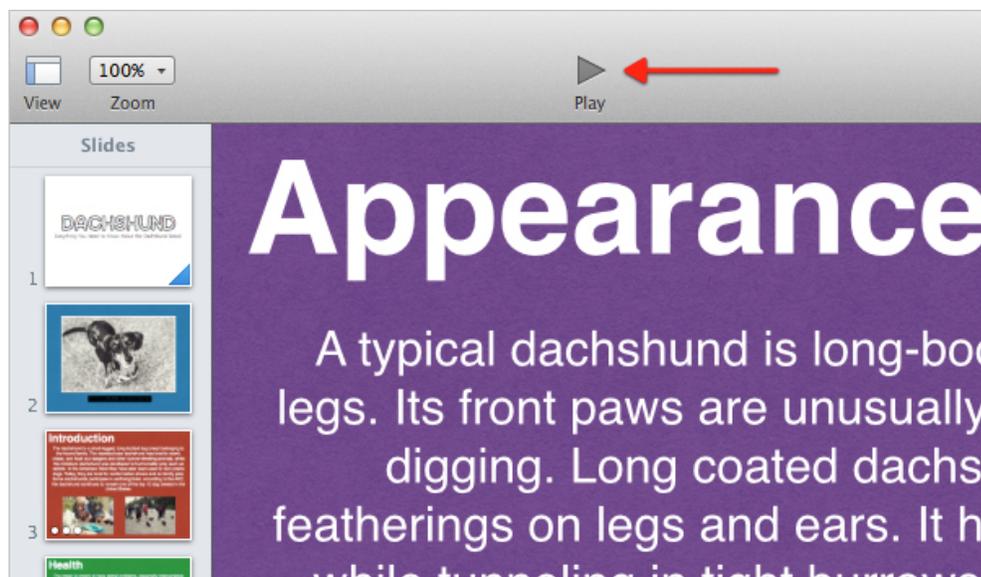

EDIT TRANSITION EFFECT

Edit the Duration, Start Transition and Delay of your chosen transition, or click Change to select another.

PLAY SLIDESHOW

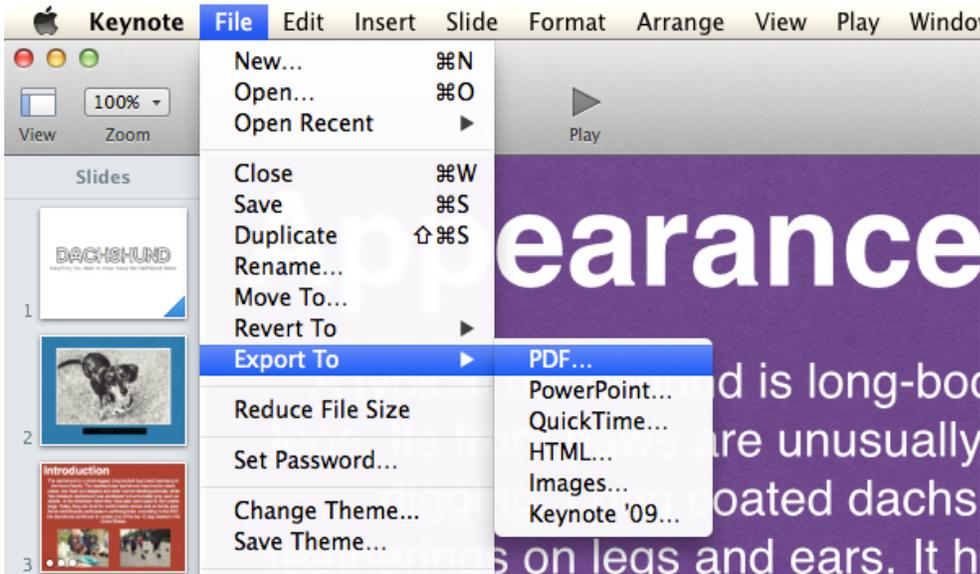

Once you have finished rehearsing your presentation, you are ready to play it to your audience. Good luck!

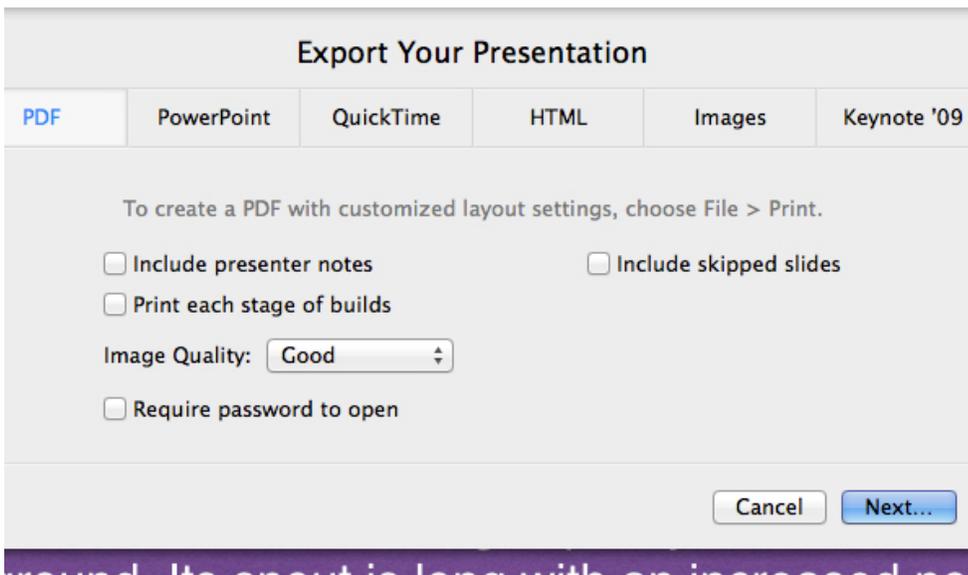

Click Play.

EXPORT SLIDESHOW

You can share your presentation with others by exporting it to a different format so that it can be viewed on multiple platforms.

Click File, Export To and then select an option from the menu. For the purpose of this tutorial, I am going to export my spreadsheet to PDF, although you can also export to PowerPoint, QuickTime, HTML, Images and Keynote '09.

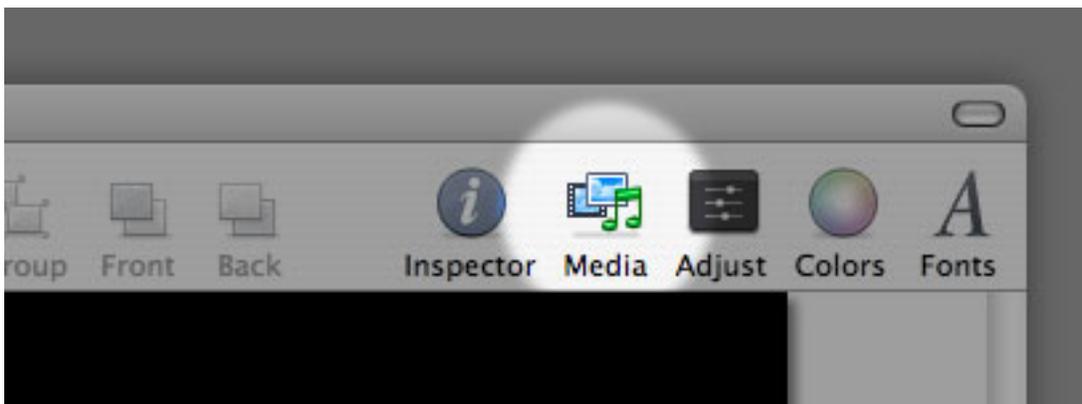

Click a checkbox to modify the appearance and functionality of the final article (optional), select the image quality and then click Next.

IMPORTING MEDIA

If you wish to import a photo, movie or song into Keynote, this can easily be done. The most convenient way to do it is by dragging the file directly into Keynote. Just drop it onto you slide.

You can also import media by choosing **Insert > Choose** from the top menu.

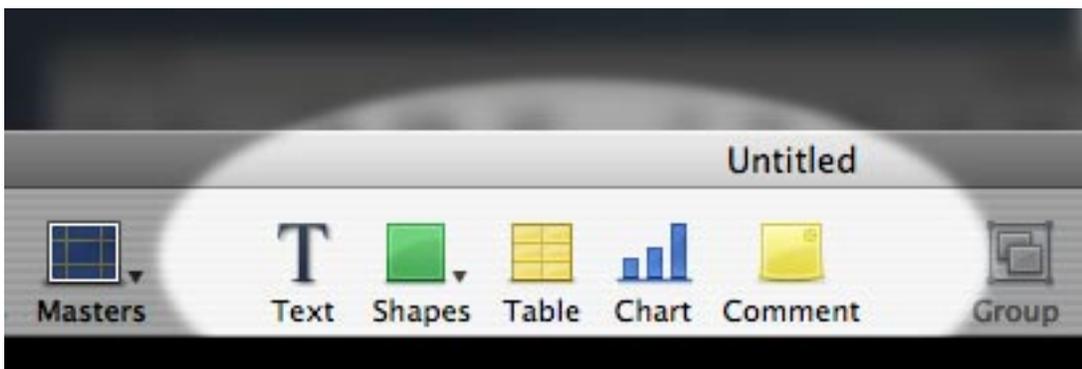

If you are importing media from iPhoto, iTunes, iMovie or Aperture, you can use the excellent media browser. Just click the media browser icon available in the top right corner of the window in order to make the browser appear.

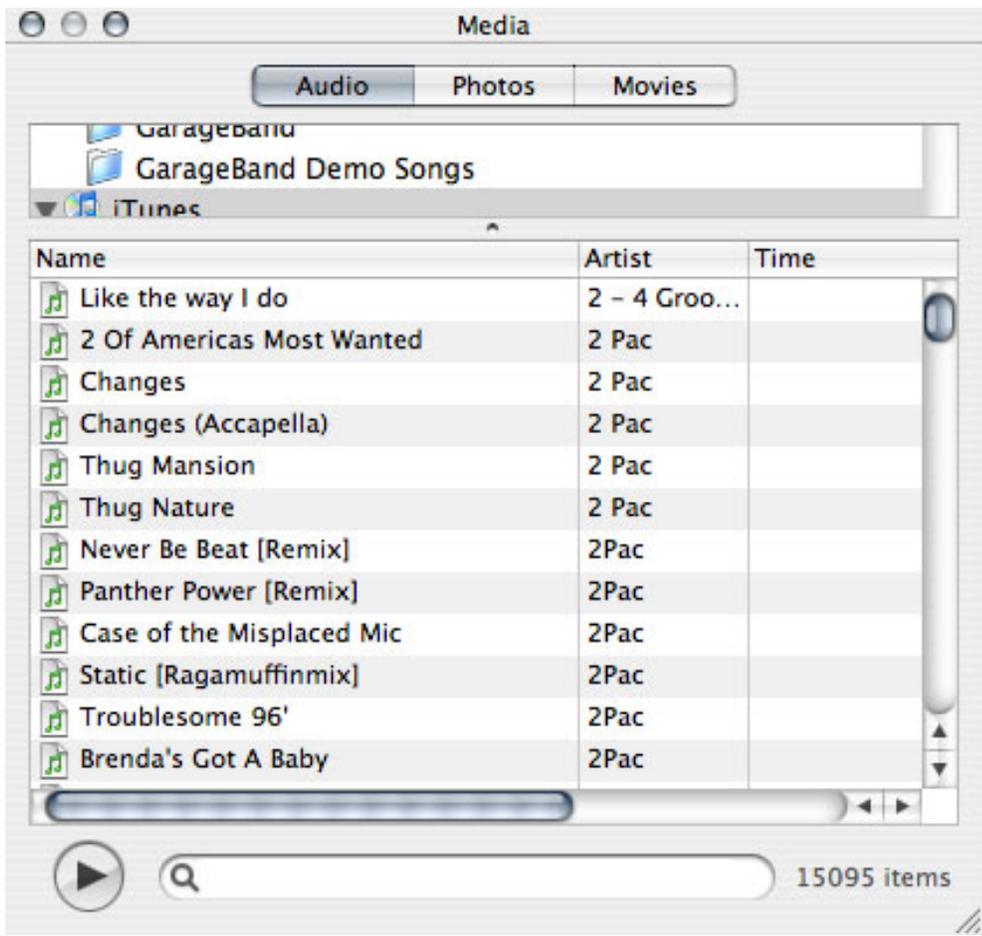

From the browser, just drag the files you wish to add to your presentation.

ADDING TEXT, SHAPES, TABLES AND CHARTS

At the top of your window, there are a few buttons that solve your graphics needs. Just click them in order to add an object.
