## Making Changes to the slide animation

1. Select the object you want to animate. 

2. Go to **Animation option** window -> **Change** ( see pic above )
3. Use the controls to change the duration of the animation, and more.

## Change the build order and timing

1. Select the object then click **Builder Order** 
2. To change the build order for a build effect, drag the build effect to a new position in the Build Order window.

If you drag a build effect to the one before it so they're touching (they become merged in the window), the second build effect plays automatically after the effect it's paired with.

3. To modify timing for a build effect, select the build effect, then choose an option from the Start pop-up menu:

On Click: The build plays when you click.

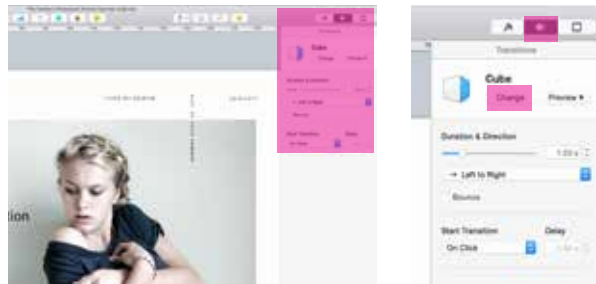

With Build (number): The build plays at the same time as the build before it.

After Build (number): The build plays after the previous build finishes. Adjust the delay using the arrows next to the Delay field.

## Making Changes to the slide animation

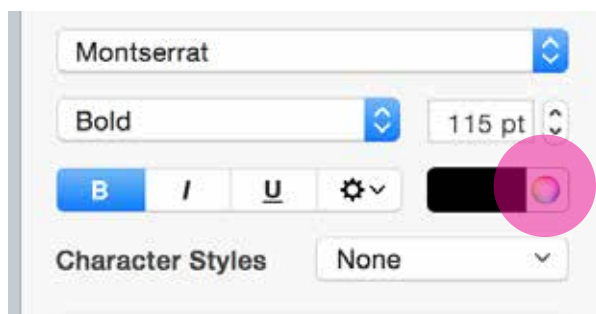

1. Select a slide in the slide navigator.

2. Go to **Animation option** window → **Change** ( see pic above )

If you choose to have a transition start automatically, it begins playing immediately after you advance the previous slide.

## Change Color

1. Select the object you want to change the colors then Click the color wheel next to the fill color in the Inspector

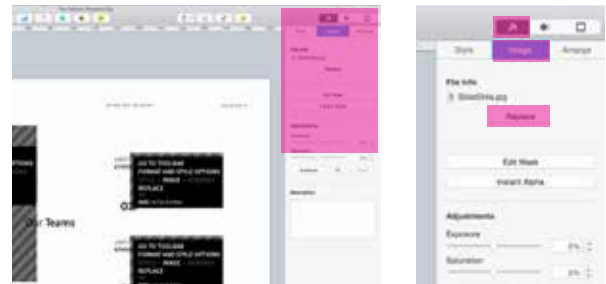

1. Move silinder or fill Hex Color automatically color on the object will change

## Change Picture

1. Select the photos you want to replace

2. Go to **Format and Style** window → **Image** → **Replace** ( see pic above )

2. A dialog box will appear. Locate and select the desired image file, then click Open

3. The picture will appear on the currently selected slide.
